

# Case Study: Solving Asset Management challenges for a leading US-based Digital Transformation Firm with mAsset

## Challenges

### Manual data sync

Existing Java-based solution performed manual pulling/syncing of data with SAP which was time-consuming.

### Manual asset allocation

Allocation of assets across BUs and geographies still necessitated the use of manual Excel sheets.

### Inefficient transfers

Asset transfers and disposal processes were inefficient.

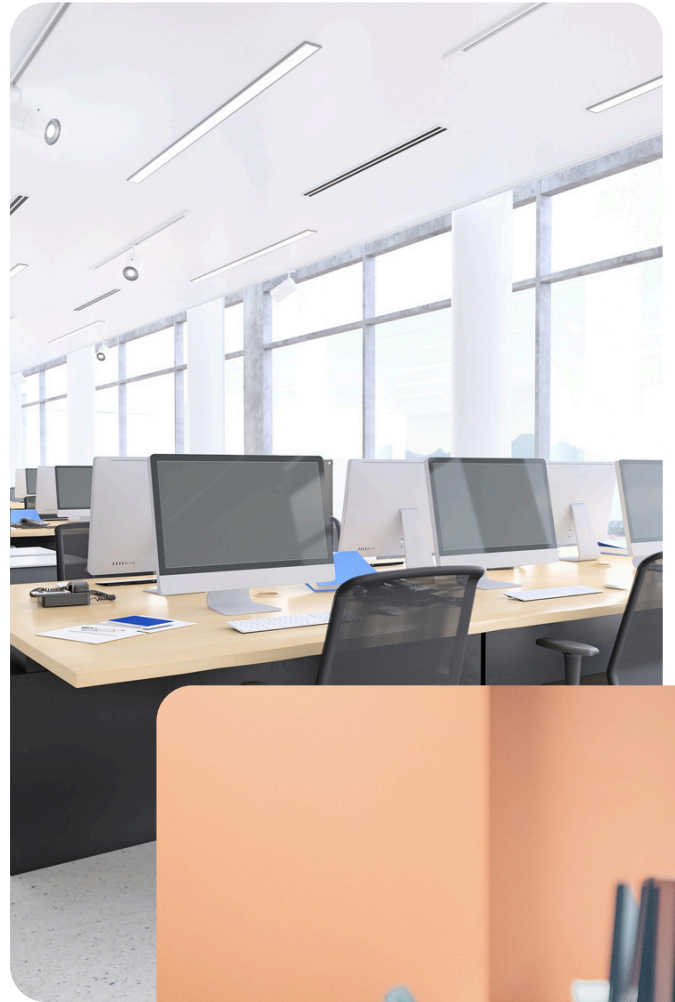

## Business Scenario

Before collaborating with Maventic, the client struggled to manage a diverse and globally dispersed asset portfolio due to acquiring new subsidiaries and expanding operations.

## Solution

Maventic implemented mAsset which leverages barcode technology, mobile readers, and SAP integration to streamline the asset management processes across tagging, allocation, transfers and disposal.

- Centralized asset management**  
 mAsset by Maventic offered a centralized repository, barcode scanning, & customizable workflows for asset management.
- Warehouse Manager's Cockpit**  
 An instant overview of activities including statuses on tracking, allocation, asset movements, AMCs and asset disposals was provided.
- Real-time sync**  
 Fiori-based interface ensured real-time synchronization with SAP making several processes, including asset disposals faster.
- Gate Pass integration**  
 Greater compliance was achieved through mAsset's gate pass integration capability which streamlined asset transfers.

## Benefits

- 
**65%** increase in asset utilization
- 
**60%** decrease in manual efforts
- 
**100%** accuracy in asset tagging
- 
**100%** compliant with internal policies
